design

Is your dust suppression system really working for you?

Do you get frustrated at the level of fugitive dust that emanates from and surrounds your workplace? You may currently have an extraction system or water sprays at your facility.

Whatever the situation, **Best-Chem** can help improve your situation.

Historically water has been the preferred treatment to suppress dust in the UK. Such an approach is not without its problems; too much water will not only affect the quality of the product being processed but also can damage vital equipment.

On the other hand if you limit the quantity of water then you may not get the desired result. Dust extraction plants are location specific and often dust is created in several locations that cannot all be captured leaving you a residual problem.

Our system designers use only the latest and proven products and applications technology.

In conjunction with our US partners, Momar of Atlanta, GA. we are able to offer you the most advanced methods of dust suppression developed to date.

Using the latest application technology and chemicals developed by Momar we can provide you a "foam" based system that will eliminate 90%+ of the fugitive dust from your entire facility.

Unlike water spray systems our method will typically use less than 1/30th of the amount of water. This will give you infinitely better results

Enjoy the benefits of our expertise.

We know all too well the problems that dust causes in our environment and the cost to business.

Would you like to:

- Enjoy better relations with your neighbours
- Comply with the ever tightening workplace and environmental regulations
- Have a healthier and cleaner environment for your staff
- Reduce maintenance costs

Best-Chem can provide a complete solution to control fugitive dust at Coal handling facilities, Quarries, Cement works, Steel works and many more places.

Our application technology and chemical products combined will cater for dust control at:

- Process points – e.g. crushers
- Transfer points & conveyors
- Stacking out
- Stockpiles
- Haul roads

suppress

A comprehensive site survey can determine your dust suppression needs.

Why not put us to the test? Allow us to fully introduce our dust suppression systems and determine your specific needs. We would welcome an opportunity to provide you with a detailed site survey & proposal. This is provided without obligation.

Contact our sales department to help find out how Best-Chem can help you. We very much look forward to hearing from.
